PATENT ANNOUNCEMENT

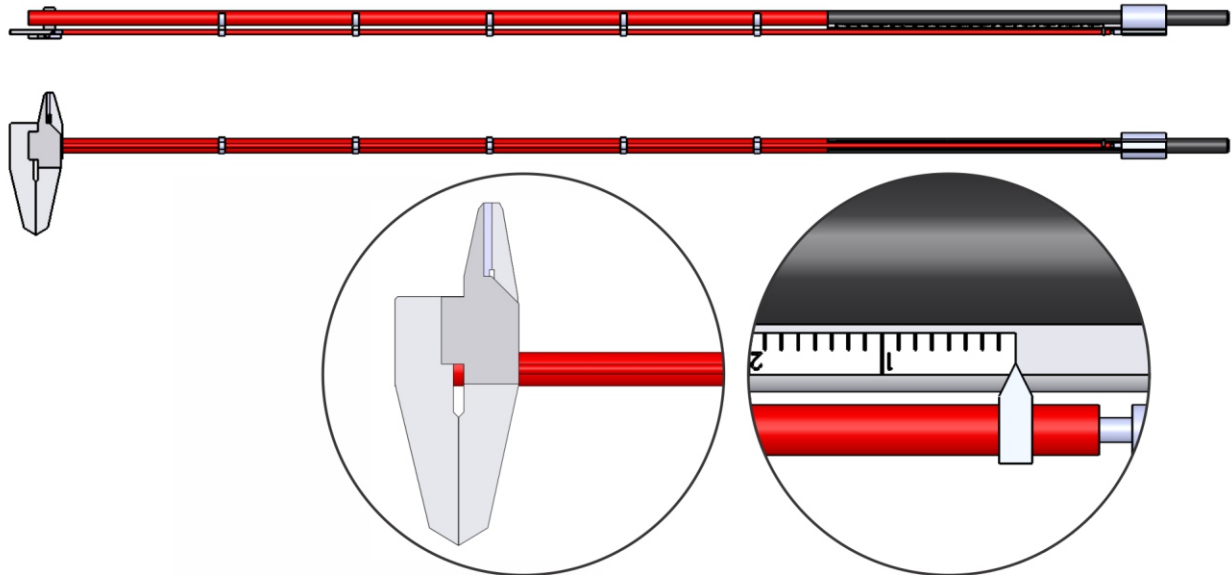

Hot Stick with Measuring Calipers

US Patent #7,721,459

Awarded May 25, 2010

This invention combines a hotstick with integrated measuring calipers. The device can be used to take precise measurements off energized equipment.

The tool has a potential market within the electric utility industry. As scheduled system downtime becomes harder to obtain, utilities will find it increasingly useful to be able to take measurements off energized equipment for maintenance planning or other purposes. Cantega's hotstick with measuring calipers meets this need.

Although Cantega currently has no plans to produce the tool, licensing inquiries are welcome.
